New, enhanced, and recently released features for AutoCAD LT

Connected Support Files
Define one set of project-aware support files and settings for an Autodesk Docs project—giving ability to view and edit DWG files without requiring additional steps to configure individual users or AutoCAD installations.

Smart Blocks: Search and Convert
Quickly search your drawings for objects to convert into instances of a newly defined block, an existing or recently used block with the help of Autodesk AI.

Smart Blocks: Placement
Automatically place blocks in your drawing based on where you've inserted the same ones thus far in your DWG file, reducing the number of clicks and saving you time in the process.

Hatch Improvements
You can now add texture to your drawings through patterns, fills, and paths—without pre-defined shapes or enclosed boundaries.

Activity Insights
Stay informed with access to essential version history and file comparison tools—with support for files managed on Autodesk Docs, stored locally, or on third-party cloud storage.

AutoLISP
Use AutoLISP to streamline workflows and enforce CAD standards through automation. Leverage thousands of previously written programs created for use in AutoCAD-based programs. Supports file types LSP, FAS, and VLX.

Autodesk Assistant
Quickly search for solutions through the conversational interface to get summarized guides, responses, and helpful learning resources.

ArcGIS® Basemaps
Access five Basemaps in the form of high-resolution satellite and aerial imagery, OpenStreetMaps and Streets, along with light and dark gray monochrome map styles.

Trace
Add design change notes and markups without altering your existing drawing from AutoCAD desktop in addition to the web and mobile apps.

Count
Automate the counting of blocks or objects within a selected area or throughout your entire drawing with a menu to identify errors and navigate through your counted objects.
