

Bluebeam Max — Supercharge your Revu

Elevate your AEC processes and project outcomes.
Available as a premium subscription plan.

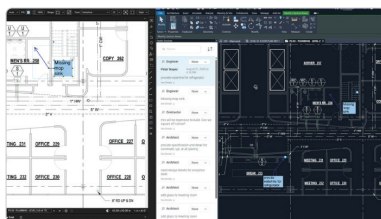

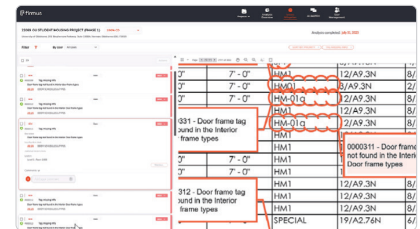

Automate the busy work

- **Revu connected to AI via MCP** - Connect Revu to your AI model (Claude) and use natural language AI prompts to automate tasks and transform markup data into actionable insights. Requires Claude account; Claude paid subscription recommended.
- **Stitching** - Automatically combine multiple drawing sheets into a single, navigable view for infrastructure-scale projects.
- **Magic markups: Duplicate as, Convert to, Offset** - Automate repetitive markup placement and reduce manual clicks to make takeoffs faster and more accurate.

Catch problems before they become financial liabilities

- **Smart Overlay*** - Use AI to quickly spot design changes and discrepancies across entire drawing sets and disciplines. Improve accuracy and resolve issues before construction begins.
- **Smart Review*** - Use AI to get clear, actionable insights of design discrepancies, scope gaps, and missing information. Catch problems early, and avoid expensive setbacks.

*These features are currently in preview as we continue to improve them.

Connect 2D markups to 3D BIM

- **Connected Studio Sessions with Revit®** See Bluebeam markups in Revit®, automatically linked to the correct spot in 2D drawing layout and 3D model view, so teams can see things clearly with less switching between products and screens.
