Digitize. Connect. Capture. Visualize.

Merely facilitating collaboration between distributed teams is not enough. True changemakers drive operational efficiency and business growth by digitizing the entire project lifecycle, connecting teams in the cloud, capturing the right data, and visualizing optimal design to deliver positive project outcomes.

The world continues to change. The acceleration of digital transformation, a changing workforce, new compliance standards around the world, disruptive labor shortages, and increasing project complexity are driving the need to be more efficient across the board.

These factors are putting pressure on AEC professionals to better manage their projects throughout the entire lifecycle from plan through handover.

What does best in class look like?

It starts with Building Information Modeling (BIM), the foundation of digital transformation. BIM enables better ways of working that lead to positive outcomes for your clients and their communities.

Autodesk BIM Collaborate Pro allows you to establish a single source of truth to help drive standardization and consistency across teams while allowing you to collect data to be later synthesized for better decision-making ability. You can then unite workflows throughout the entire project lifecycle and identify and delegate responsibility to the right people at the right time.

BIM Collaborate Pro allows AEC firms to monitor design packages to track project progress and issues while managing roles across different parts of an organization or multiple organizations. Digitizing these workflows help customers improve operational efficiency and reduce risk.

Improve Collaboration

Work smarter
Increase design quality with clear communicated requirements.

Streamline workflows
Reduce the time it takes to deliver projects by collaborating in real-time and streamlining the review process.

Knock down barriers
Reduce frustration from siloed work environments.

Increase Workload Capacity

Prioritize tasks
Automate repetitive workflows so you can focus on more relevant tasks and do more with less.

Deliver fast results
Improve your team's ability to meet project deadlines at scale.

Define roles and responsibilities
Improve alignment with integrated internal and external cross functional teams' processes and workflows.

Improve Data Exchange

Get organized
Make it easier and faster to search for lost data and manage files.

Standardize workflows
Improve project quality with consistent processes and increase transparency throughout entire project lifecycle from design through construction.

Create best practices
Create data-driven insights to optimize continuity across projects—such as streamlining processes or transferring best practices across projects.

Visualize Better Service Client Needs

Enable agility
React quickly to dynamic industry standards and growing project complexity.

Value transparency
Increase clear communication with and visibility for your customers.

Increase digital maturity
Create a competitive advantage for your business through advanced digital capabilities that improve the customer experience.

Digital design and collaboration management powered by BIM allows you to deliver positive project outcomes on time and under budget.

Set your project on the right track.
