

Topcon Field Robotics

This class teaches the fundamental skills every operator will need to become productive using a Topcon Robotic Total Station with Topcon Field (**for Windows**) data collection software. We will cover from basic to advanced features, including setup, coding, mapping, data collection, and stakeout.

This is a hands-on class, which will be held in both a classroom and an outdoor environment. Please dress appropriately for the weather. Applications will be taught in the classroom and then applied outdoors in the field. Attendees must bring their own Robotic Total Station along with a Data Collector that has the most recent version of Topcon Field (for Windows) installed.

**For iOS or Android versions, don't hesitate to contact your local Sales Representative for customized training.*

Course Length: 2 days

-
- Basics of Robotic Total Stations
 - Overview of Topcon Field
 - Configuration
 - Job Setup and Instrument Interface
 - Data Collection- Using Points, Lines, and Code Libraries
 - Instrument Setup- Occupation, Resection, Traverse, and Backsights
 - Stakeout - Points, Lines, and Surfaces
