

Topcon Office Basic Essentials

This one day class introduces new users into the ecosystem of Topcon Office. This class will go over the processes and workflows that come with the latest version of Office Basic module. From file importation all the way to sending out a proper TP3 file to the field. This class would be great for anyone that is looking to update from 3D Office, which is no longer supported.

Classroom computers are available in some classrooms locations, however it is required that you bring a proper laptop with the most recent version of Topcon Office downloaded and ready to use.

Course Length: 1 day

Topics Covered:

- Installation (check in/out)
- Overview of UI (toolbars, short cuts, command line, etc. etc)
- Creating new projects - (templates)
- Importation workflows (DWGs, PDF, XML)
- Layer control and cleanup
- Editing and modifying the imported data (points, lines, surfaces).
- Creating basic linework
- Creating Layout and Control Points.
- Surface creation and Editing
- Volumes
- Data exportation (TP3, MJF, DWG)
