

TOPCON SITELINK V2

ONLINE COURSE OUTLINE

Solutions Store

(855) 289-1772

training@topconsolutions.com

This class is designed to make end users understand the process of creating a Sitelink v2 site that can be downloaded directly through a Topcon cellular modem to data collectors or machines alike. We will discuss how to create Tasks and Sequences from our design data and simulate an operator connecting to the site. In the machine we will receive a grading task, collect (as-built) AB_Live data, AB_design sets and understand how to remotely support the machines from the office. From this data collected and synced to Sitelink v2 we will be able to download the AB_data, view the machines grading live, and create reports that can be integrated into Topcon Office Software for calculations.

Prerequisites:

- Basic knowledge and understanding of Topcon's 3DMC solutions
- Basic knowledge of Remote Support Desk
- Active myTopcon account
- Has at least 100 service points in myTopcon account
- Install the most recent version of Remote Support Client on Machine control displays, PC, and Data collectors

Course Length: 4 Hours

- Site Creation
- User Group Creation
- As-Built Live 3DMC 13.x only!
- As-Built (dirt work, IC Roller*as needed)
- Cellular Data Exchange from Field to Office
- Reports (Haul, Activity, Height Map)
- MAGNET Office connection
- Remote Support
